

## **Business and Data Analyst to \$35/hour**

This global financial services leader needs interim support in their Portfolio & IT Control area.

The role assists in the maintenance of key financial reporting processes, and participates in the planning, development and submission of financial plan deliverables.

The role will encompass:

- Analyzing complex data to identify trends or patterns and providing reports for both internal and external stakeholders;
- Developing and implementing data collection systems and strategies;
- Coordinating end-user materials;
- Conducting internal control reviews, identifying and escalating/reporting deficiencies;
- Make recommendations and assist with action plans to close identified gaps;
- Work with business units to resolve related day-to-day issues;
- Conduct periodic testing, review efficiencies, provide ongoing support.

The requirements include: 5 years relevant experience in accounting/operations finance functions; post-secondary education and CMA designation preferred; understanding of complete Software Development Life Cycle; advanced Excel skills; VBA and data modelling skills would be an asset; well-developed analytical and communication skills, the ability to think strategically, strong problem-solving ability, the ability to juggle and manage multiple assignments and work with significant amounts of information.

This will start as a temporary position with the possibility of extension.
